

British Values in Science

Individual liberty

In Science we learn to confidently share our own opinions and ideas and respect the opinions of others. Within all our lessons pupils are encouraged to make their own choices when planning an investigation and recognise that others may have different points of view for where they would start.

Democracy

We learn through our lessons to take into consideration the views and opinions of others. We take turns and instructions from others.

Mutual Respect

When learning and investigating during lessons we work as a team, supporting each other and sharing ideas and opinions. We discuss our findings and respect each other's work - through this we offer support and advice to others.

Tolerance

Through lessons and discussion we look at scientific discoveries which have come from other cultures and how religious beliefs often compete with scientific understanding. We learn to be respectful of these beliefs and appreciate and understand them.

The Rule of Law

We learn and understand the importance when working scientifically to follow our safety rules and we allow students to understand the consequences of their actions, which in turn helps students apply this understanding to their own lives.
